

# MICRO SURFACING

Micro Surfacing is a polymer-modified asphalt emulsion that is one of the most cost-effective pavement maintenance tools on the market today. Micro Surfacing provides a durable wearing course, seals the existing pavement surface, yields high skid resistance, and corrects minor rutting issues.

## Benefits & Features

- Quick return to traffic within 90 minutes
- Resists shoving and rutting
- Promotes excellent skid resistance
- Adds an additional 7-9 years of service life
- Adjustable thickness based on project need
- No milling or casting adjustments required

## Applications

- Highways
- Streets and Roadways
- State and Metro Parks
- Airport Runways and Taxiways
- Cemeteries
