

SAMI (Stress Absorbing Membrane Interlayer) is a combination of polymerized asphalt emulsion and quality crushed aggregate. When used as a flexible membrane interlayer prior to Micro Surfacing or conventional asphalt, SAMI waterproofs the sub base and helps reduce reflective cracking, while extending the life of the subsequent overlay.

Benefits & Features

- ▶ Open to traffic within minutes
- ▶ Minimizes and delays reflective cracking
- ▶ Enhances compaction of new asphalt overlay
- ▶ Waterproofs the underlying pavement
- ▶ Adds ductility to withstand freeze/thaw cycles
- ▶ 100% Recyclable

Applications

- ▶ Highways
- ▶ Streets and Roadways
- ▶ State and Metro Parks
- ▶ Airport Runways and Taxiways
- ▶ Asphalt and Concrete Pavements
- ▶ Milled and Non-Milled Surfaces
